Rafter G Cattle Company has followed our Herd Health Recommendations very well. Heifers are developed with a good modified live vaccination program including IBR, BRSV, PI3 and BVD. The nutrition and general herd health and care has always been excellent. These heifers were pregnancy tested November 15th, 2017 and tails/ switches were cut on the opens. These heifers were also palpated in the spring also for reproductive health, and pelvic abnormalities.

We wish them the best of luck with the sale.

Mike Ross DVM Dawson Creek Veterinary Clinic
